

Business Intelligence to Power Your Pathology Practice

Turning data into actionable insights – delivered in a format your team can actually use

Pathology practices need timely, data-driven analytics and business intelligence to manage and grow their business. Health Prime's analytics platform has launched new robust and user-friendly dashboards that provide a clear view of practice performance – covering specimen volumes, CPT coding trends, payer behavior, turnaround times, and more.

Powered by our analytics platform, our dashboards can help uncover patterns, compare performance over time, and identify revenue opportunities.

With Health Prime's new analytics-driven dashboards, you can:

- Sort between critical date elements, including date of service and date of posting
- Track volumes in real time to anticipate workload and staffing needs
- Spot coding and billing trends before they impact reimbursement
- Monitor payer behavior to stay ahead of denials and delays
- Measure turnaround times and benchmark against targets

Get to know our new dashboards

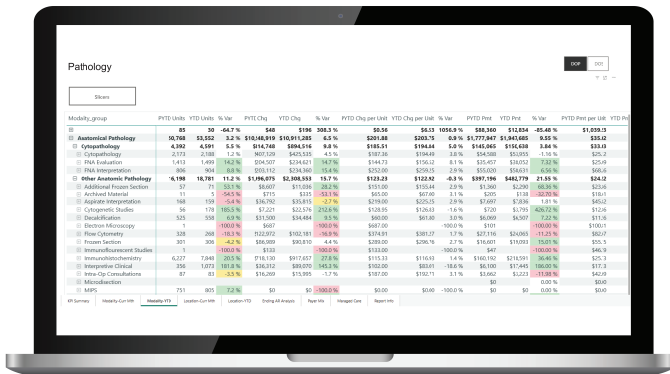

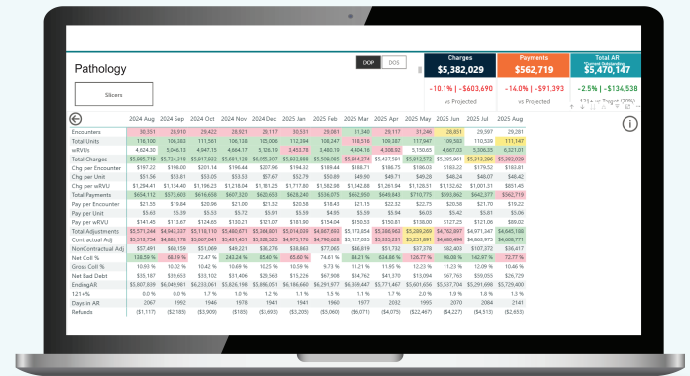

Practice Summary:

Get an at-a-glance window into practice performance with our summary dashboard. Prior year and rolling month average trends are easy to see in this powerful view of charge, payment, payer mix, and aging AR trends.

Month-Over-Month KPI Summary:

Monitor trends with a dashboard that provides color-coded data for each month comparing projected values. This actionable data lets practices know immediately whether performance is within 5% of the expected variance on encounters, units, wRVUs, charges, payments, refunds, adjustments, collection rates, ending AR balance, and days in AR.

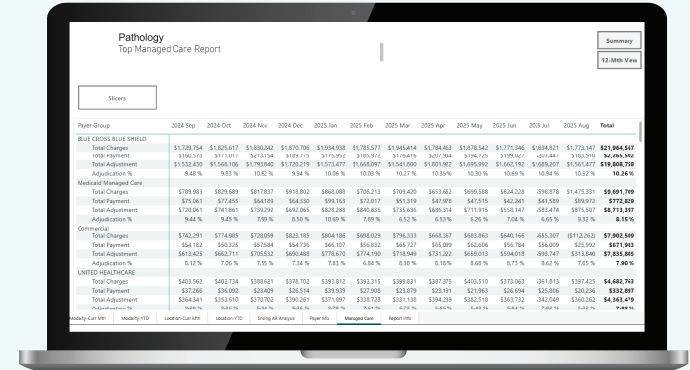

Prior-Year-To-Date & Year-To-Date Comparison by Modality:

Dive deep into performance metrics with this dashboard that includes a detailed breakdown of practice performance by service modality. Detailed practice performance information is included on anatomical and clinical pathology, as well as all sub modalities.

Managed Care:

Track payer performance and gain insight into managed care results with a dashboard that can monitor how payer groups are performing. With this dashboard, practices can track adjudication rates, payments versus adjustments, and expected cash flow according to contractual expectations.
